

ADIFOAM IC-500

High performance antifoam for glazes and slips

PROPERTIES AND APPLICATION

ADIFOAM IC-500 is a product specially studied to apply in slips and ceramic materials.

ADIFOAM IC-500 is an antifoam for eliminate air trapped in the mixture and help to avoid the problems caused by foam in the process.

Its produces a fast and homogeneous absorption within the glaze suspension, removing bubbles, and eliminating surface defects such as dimples.

It is particularly suitable also for waste water purification plants.

TECHNICAL FEATURES

ASPECT:	Brown liquid
SOLUBILITY:	Can be dispersed in water
DENSITY 20°C:	0,9 +/- 0,02 g/cm ³
VISCOSITY COPA FORD 4mm:	200 - 400 cp.
COMBUSTION RESIDUE:	Max. 3%

PACKING

Drums of 25 Kg, 120 Kg and tanks of 1000 Kg.

STORAGE

ADIFOAM IC-500 keeps for a long time when stored in tightly closed original package.
